Response to Office Action dated October 4, 2004

## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in this application.

## **Listing of Claims:**

Claim 1 (Currently Amended): A communication terminal apparatus capable of sending and receiving e-mails comprising:

an input section for entering an e-mail address;

a storage section for storing a plurality of partial e-mail addresses, at least one of the partial e-mail addresses stored in the storage section comprising two or more different e-mail address parts; and

a selection section for selecting one from among the stored partial e-mail addresses; wherein in entering an e-mail address, a <u>portion part</u> of the e-mail address is first entered from the input section and then the partial e-mail address selected from the storage section by the selection section is combined with the <u>portion part</u> of the e-mail address entered from the input section to complete the e-mail address entry.

Claim 2 (Currently Amended): The communication terminal apparatus of claim 1, wherein the plurality of partial e-mail addresses <u>is</u> are stored in a predetermined order in the storage section, the selection section retrieves the partial e-mail addresses stored in the storage section in that order to select one from there among, and the order in which the selection section retrieves the partial e-mail address can be arbitrarily specified.

Claim 3 (Currently Amended): The communication terminal apparatus of claim 1, wherein the plurality of partial e-mail addresses stored in the storage section is are classified into predetermined categories, and selection from among the stored partial e-mail addresses is carried out in response to selection of one from among the predetermined categories.

Ooi *et al.* Serial No. 09/822,245 Response to Office Action dated October 4, 2004

Claim 4 (Currently Amended): The communication terminal apparatus of claim 2, wherein the plurality of partial e-mail addresses stored in the storage section <u>is</u> are classified into predetermined categories, and selection from among the stored partial e-mail addresses is carried out in response to selection of one from among the predetermined categories.

Claim 5 (New): A communication terminal capable of sending e-mail comprising: a user-operable input section;

a storage section for storing one or more partial e-mail addresses each comprising at least a top-level domain name and a sub-level domain name; and

a selection section for selecting one of the partial e-mail addresses,

wherein a complete e-mail address of an e-mail recipient is specified by combining an e-mail address portion input using the input section with the selected partial e-mail address.

Claim 6 (New): The communication terminal of claim 5, wherein the partial e-mail addresses stored in the storage section are organized into categories.

Claim 7 (New): The communication terminal of claim 6, wherein the categories include a category for partial e-mail addresses comprising a top-level domain name and a sublevel domain name.

Claim 8 (New): The communication terminal of claim 6, wherein the selection section comprises one or more keys usable to select one of the categories.

Claim 9 (New): The communication terminal of claim 5, wherein the selection section comprises one or more keys usable to step forward and backward through the partial email addresses.

Claim 10 (New): The communication terminal of claim 5, embodied as a mobile telephone.

Serial No. 09/822,245

Response to Office Action dated October 4, 2004

Claim 11 (New): The communication terminal of claim 5, embodied as a facsimile apparatus.

Claim 12 (New): A communication terminal capable of sending e-mail comprising:

a display section;

a keypad; and

a storage section for storing one or more partial e-mail addresses each comprising two or more different e-mail address parts,

wherein a complete e-mail address of an e-mail recipient is specified by combining one or more e-mail address parts with two or more e-mail address parts designated by making a single selection from a display of the partial e-mail addresses displayed on the display section.

Claim 13 (New): The communication terminal of claim 12, wherein the one or more e-mail address parts is input character by character using the keypad.

Claim 14 (New): The communication terminal of claim 12, wherein the partial email addresses stored in the storage section are organized into categories.

Claim 15 (New): The communication terminal of claim 14, wherein the categories include a category for partial e-mail addresses comprising a top-level domain name and a sublevel domain name.

Claim 16 (New): The communication terminal of claim 14, wherein the keypad comprises one or more keys for selecting one of the categories.

Claim 17 (New): The communication terminal of claim 12, wherein the keypad comprises one or more keys for stepping forward and backward through the partial e-mail addresses.

Ooi et al. Serial No. 09/822,245 Response to Office Action dated October 4, 2004

Claim 18 (New): The communication terminal of claim 12, wherein the one or more partial e-mail addresses each comprises at least a top-level domain name and a sub-level domain name.

Claim 19 (New): The communication terminal of claim 12, embodied as a mobile telephone.

Claim 20 (New): The communication terminal of claim 12, embodied as a facsimile apparatus.

Claim 21 (New): A communication terminal apparatus capable of sending and receiving e-mails comprising:

an input section for entering an e-mail address;

a storage section for storing a plurality of partial e-mail addresses, wherein the storage section is configured so that one of the stored partial e-mail addresses can be the same as one or more of the e-mail address parts of another one of the stored partial e-mail addresses; and

a selection section for selecting one from among the stored partial e-mail addresses; wherein in entering an e-mail address, a portion of the e-mail address is first entered from the input section and then the partial e-mail address selected from the storage section by the selection section is combined with the portion of the e-mail address entered from the input section to complete the e-mail address entry.
